

8th IWA Microbial Ecology and Water Engineering Specialist Conference (MEWE2019) Hiroshima, Japan 17th-20th November 2019

Conference topics:

- Managing microbial community
- Environmental biotechnology
- New microbial processes for environmental engineering
- Drinking water microbiology
- Antibiotic resistant genes
- Viruses in water engineering
- System biology approach
- OMICS, etc

The goal of the Microbial Ecology and Water Engineering (MEWE) specialist group is to promote the rational and effective engineering of open microbial systems in the water cycle using emerging technologies and concepts in microbial ecology. This topic is of key importance to the water sector, since the advent of advanced microbial ecology techniques provide deep insight into how the water cycle functions, both from a treatment performance perspective as well as the global loss of water resources to pollution.

Important dates:

Abstract submission open:

1st November 2018

Abstract deadline:

10th May 2019

Notification of abstract acceptance:

10th July 2019
